Generic Codes to sort by for discounting

Generic **C**odes have been added to all products in all catalogs that make it easier to sort products to apply discounts.
Product types within a catalog that share the same discount will many times share the same generic code.

Generic codes are the same as the catalog code or the catalog code that the product originates from.
For example:
Currents products in the Currents catalog will have GC=KCU (KCU is also the catalog code for the commercial Currents catalog.)
Autostrada products in the Currents catalog will have GC=KAS (KAS is the catalog code for the commercial Autostrada catalog.)

All Essentials catalogs will have the GC= of the commercial catalog that they originate from.
For example:
Essentials Autostrada products will have GC=KAS (KAS is the catalog code for the commercial Autostrada catalog)

All GSA catalogs will have the GC= of their matching commercial catalog.
For Example:
Currents GSA products will have GC=KCU (KCU is the catalog code for the commercial Currents catalog)

The following are exceptions to this rule based upon multiple discounts within a specific catalog.
