

Integrating material and supply chain management with sales and manufacturing processes reduces inventory costs and improves on-time performance. Unlike traditional MRP systems, 2020 Insight works in real-time to provide you with instant demand visibility. One screen provides you with a view of all sources of demand for an item with simple drill downs to history and availability information. One-click purchase orders can streamline your purchasing workflows. 2020 Insight provides integrated purchasing, inventory and material planning capabilities that meet the unique needs of furniture manufacturers.

Make it easier to manage your purchasing.

Eliminate production delays caused by missing parts by alerting and ordering purchase-to-order items when the sales order is created.

Make it easier to reduce inventory costs.

Reduce inventory costs through accurate planning and inventory accuracy with automated issue transactions.

Benefits

Provide accurate demand planning

Use live data instead of aged reports to improve demand planning based on your current demand, historical trends and forecasts.

Reduce inventory costs

Reduce work-in-process inventories by integrating inventory control with sales and production processes.

Streamline purchasing processes

Create user-defined workflows and automation for one-click PO creation to streamline purchasing operations.

Make better decisions faster

Interactive reporting capabilities allow you to view results, drill down to details and perform actions based on actual conditions.

Make it easier to spot opportunities.

Simple drill-downs into demand details, usage history, in-process purchase orders and current availability provides quick visibility into business activities and trends.

The screenshot shows a software window titled 'Purchase Stock Control'. It contains a table with columns for Item, Order No, Order Date, Pending Demand, Project Demand, Order Line Description, Customer Name, Release Description, and Stock Availability. The table lists various items with their respective order numbers and dates, and provides a detailed view of the demand and availability for each.

Make it easier to improve material planning.

View all the demand and availability projections for a purchased or made-to-stock item from a single screen to improve material planning and execution.

The screenshot shows a software window titled 'Purchase Stock Control'. It displays a summary view of demand and availability projections for a specific item. The table includes columns for Period, Demand, and Availability. The 'Demand' column is further broken down into 'Forecast' and 'Actual' demand. The 'Availability' column shows the projected availability for the item over time.

Features

Purchasing management

Define your purchasing workflows and business rules to enable automation. The purchase-to-order functionality alerts you to new demand and provides act-on dates to ensure timely delivery.

Inventory control

Improve on-hand item management with a complete inventory control system that supports user-defined warehouses and locations, cycle counting, receiving and 3-way invoice matching.

Advanced material planning

View changes in demand for purchased and make-to-stock items in real time from a single consolidated screen.

One click PO

Automatically generate purchase orders and forward approval requests to automate purchasing processes.
