

Managing your business rules effectively is the key to operational success. 2020 Insight improves the information flows across your organization to better coordinate and optimize every step of your operations. Intelligent and flexible rules developed for product definitions, bills of material and manufacturing processes are used and reused across the production process chain. Rules are easy to create and can be changed as your business changes. 2020 Insight allows you to maximize your product offering and productivity, while reducing overhead.

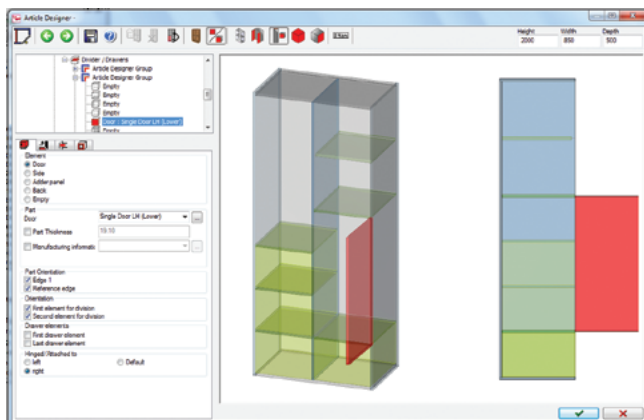

Make it easier to launch new product lines.

Catalogs can be created quickly and easily by grouping products and their configurations into offerings that are specific to customers or market channels.

Make it easier to develop complete and accurate manufacturing data for standard and custom products.

2020 Insight's unique approach to data modeling creates bills of material, routings, manufacturing instructions, CNC code and material demand, automatically.

Benefits

Enhance business agility

Product and process definitions are user-defined and flexible, allowing you to quickly make changes that match changes in your sales or manufacturing environment.

Achieve consistent performance

Share a single set of business rules to reduce duplication and enable consistency throughout your production processes.

Accelerate time to market

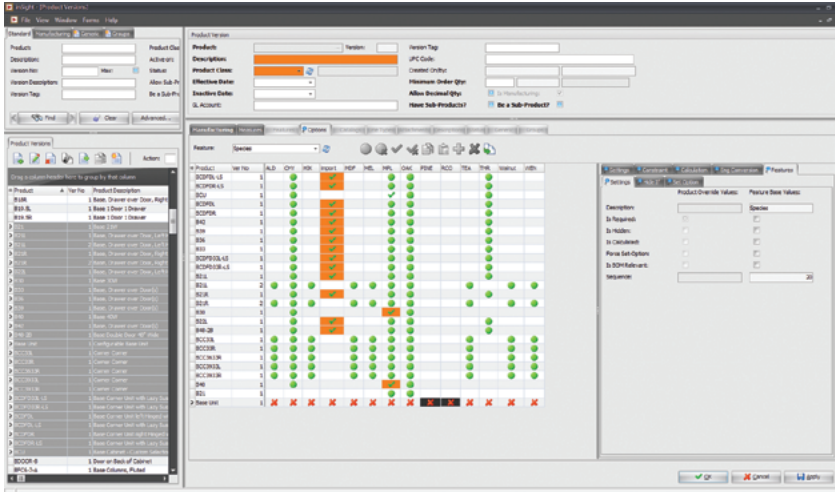

Streamline product and process data maintenance to reduce time to market for new product options by up to 90%.

Increase productivity

Accurate and automated production data allows more efficient use of resources and people, reduces manual intervention and optimizes production scheduling.

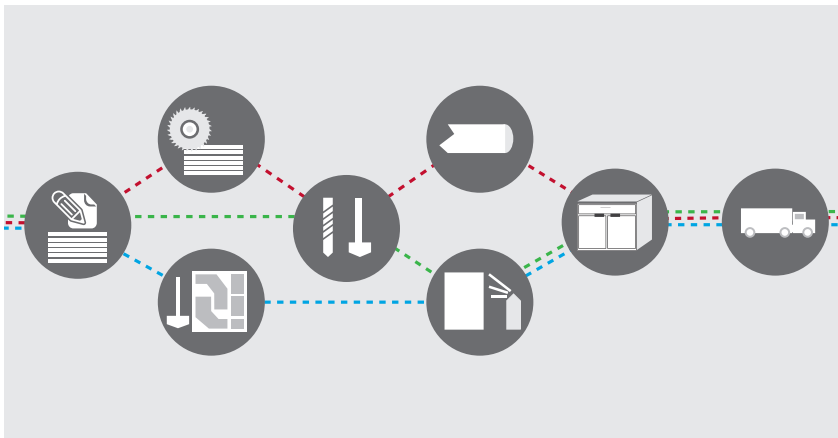

Make it easier to offer more product options.

Product definitions are stored as configuration parameters that can be adjusted to accelerate time to market for new products, allowing you to meet new market requirements in hours instead of weeks or months.

Make it easier to implement your business rules.

Manufacturing processes are centrally defined and managed by 2020 Insight for consistent execution.

Features

Rule configuration forms

User-friendly screens are used to define products, bills of material and manufacturing processes that are stored in a central database.

Product catalog management

Offer multiple catalogs by grouping products, options and pricing for different sales channels from a common product repository.

Dynamic bills of materials

Automatically generated bills of material improve data accuracy, shorten lead times and maximize product offering.

Automatic manufacturing data

Automatically created CNC code, work instructions and routing steps ensure product quality and maximize throughput.
