*The issue that you are having is because your downloaded in is square and it will need to be rectangular.
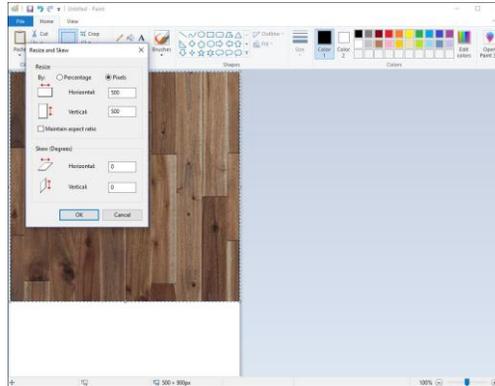

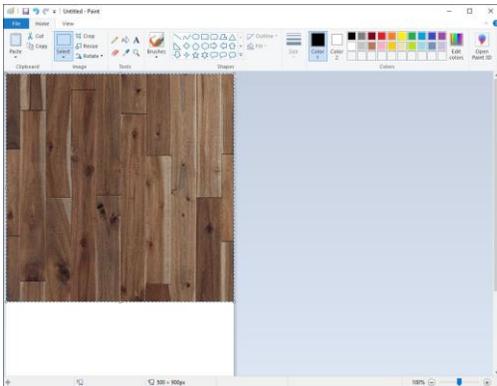

Step 1   Downloaded Image at 500 X 500

Image Size 500 X 1080 – After resizing in paint

This will give you the length that you require, depending on your needs. You can resize the length or width per the size needed. You can also rotate your image if needed depending on which way your flooring needs to run.

Step 2   Open your image in paint-   Step 3   Select Resize in the menu-
                                                          Go to pixels-
                                                          Uncheck Maintain aspect ratio-

Step 4 and Step 5   Change the ratio to your requirements, either Horizontal or Vertical-enter your new ratio and click OK and save. Just remember to uncheck the Maintain Aspect Ratio box or the resize will remain square. This method can be used for any texture image, such as floor tile, subway tile for backsplashes, granite countertops, scenery or any other texture images.
